MANUFACTURERS OF LAMINATED PLASTICS AND  
SPECIALIZED EQUIPMENT FOR INDUSTRY, SCHOOL AND OFFICE

The management of McNeff Industries, Inc. has almost 20 years of experience as a leader in the design and production of institutional, educational and home furniture.

Twin brothers Joe and George McNeff founded the Falcon Manufacturing Co. in 1946 to make metal dinette furniture for the home. In 1952, they expanded their operations by establishing Plasco Inc. to produce plastic surface living room tables and McNeff Industries to make plastic-surface tops for the Falcon dinette tables. In 1957, McNeff opened a 40,000-square-foot plant to manufacture high-pressure laminated and decorative plastic sheets.

McNeff began producing language laboratory work stations and tables of all types several years ago for use in high schools, universities, the military industry and government. They include teacher console units and student work stations, designed to be equipped with amplifiers, headsets, and earphones.

McNeff's experience in producing the well proven work stations and consoles led to the electronic assembly stations, scientifically designed to exacting specifications for assembly of miniature and sub-miniature electronic components. These color-coordinated units — a new concept tailored to the needs of the electronics industry — offer maximum comfort and efficiency.

Today, McNeff is the only supplier in the industrial South that offers complete capabilities in the manufacture of both tables and plastic tops. Among the variety of furniture products for industrial, educational and home use are the Modumac series of work benches and test stations, Economac chairs, Duramac plastic tops, and institutional all-purpose tables.
